Dear Hiring Manager,

I am excited to apply for software engineering internship opportunities. I am a Computer Engineering student at Purdue University pursuing an AI/ML minor and graduating in May 2028. Across three internships, I have built and tested backend, data, and machine learning systems with a focus on reliability, measurable performance, and practical user impact.

Most recently at ADT, I built Python and pandas workflows to classify more than 600 AI support interactions and developed a pytest suite covering over 40 customer flows. The testing exposed more than 25 defects, while automated validation and reporting reduced triage time from five hours to 90 minutes. That work strengthened my ability to turn ambiguous product behavior into repeatable checks, clear findings, and improvements that teams could act on quickly.

At L3Harris, I processed more than 200,000 NASA NOS3 telemetry records and improved model recall from 68% to 83% through feature engineering and error analysis. I also automated a Linux-based environment that captured over 10,000 system traces and reduced setup time by 40%. Earlier at Alpha Net, I supported JavaScript and AWS Lambda workflows serving more than 50,000 monthly sessions and contributed Swift and Kotlin REST features that reduced response time by 20%. Together, these roles taught me to move comfortably between data pipelines, APIs, testing, and customer-facing systems.

I continue building that depth through projects such as a concurrent Java web crawler and search engine that indexed more than 25,000 pages with 16 workers and achieved 75 ms p95 query latency, and a Python semantic search platform that served a 100,000-message corpus in under 250 ms. I would bring this same combination of curiosity, disciplined implementation, and ownership to your engineering team.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience in Python, Java, cloud services, testing, and ML-enabled systems can contribute to your team while I continue growing as a software engineer.

Sincerely,

Soham Jindal
