EDUCATION

PURDUE UNIVERSITY

B.S. Computer Engineering

- Minor in Artificial Intelligence/Machine Learning

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Architecture, Computer Networks

West Lafayette, IN

Expected May 2028 | GPA: 3.7

TECHNICAL SKILLS

Languages: Python, Java, C++, C, JavaScript/TypeScript, SQL, Kotlin, Swift

Frameworks & Data: Spring Boot, FastAPI, Flask, Node.js, React, PostgreSQL, SQLite, pandas, NumPy, scikit-learn, FAISS

Systems & Tools: Linux/Unix, Git, Docker, AWS, Google Cloud Platform, pytest, JUnit, GitHub Actions CI/CD

EXPERIENCE

ADT

Software Engineering Intern — AI & CX Systems

Boca Raton, FL

May 2026 – July 2026

- Built a Python/pandas ETL and classification pipeline processing 600+ AI-assisted support interactions, standardizing fragmented use-case labels, while prioritizing defects by severity, frequency, and business impact.
- Built a Python/pytest regression suite covering 40+ conversational AI and knowledge-retrieval flows, surfacing 25+ defects in containment, escalation routing, and agent handoffs.
- Automated validation and reporting across alarm, billing, and account datasets; partnered with AI and engineering teams to verify fixes, cutting weekly defect-triage time from 5 hours to 90 minutes.

L3Harris

Software Engineering Intern — ML Systems

West Lafayette, IN / Remote

August 2025 – December 2025

- Developed Python ETL and validation pipelines for 200,000+ NASA NOS3 telemetry records, producing windowed features with automated schema, completeness, and outlier checks.
- Tuned scikit-learn anomaly-detection models, increasing labeled attack recall from 68% to 83% through feature engineering and error analysis; evaluated with precision, recall, ROC-AUC, and confusion matrices.
- Automated VirtualBox/Linux packet-capture and injection experiments, generating 10,000+ labeled traces and reducing environment setup time by 40%.

ALPHA NET

Software Engineer Intern

Santa Clara, CA

May 2025 – August 2025

- Shipped JavaScript web features and AWS Lambda-backed data workflows supporting 50,000+ monthly user sessions.
- Built native features in Swift and Kotlin with REST API integrations, cutting user-data response time by 20%.
- Automated AWS Lambda and Amplify deployment workflows, cutting release turnaround time by 30%.

PROJECTS

Semantic Search and Response Platform | Python, Flask, FAISS, SQLite, Docker

2026

- Built a Flask/SQLite REST API indexing 100,000+ messages using FAISS approximate-nearest-neighbor search, with under 250 ms retrieval latency.
- Implemented recency-weighted top-k ranking, generation, similarity scoring, and content validation; containerized the service with Docker.
- Created a 500-query benchmark, improving Recall@10 from 0.78 to 0.87 and MRR from 0.69 to 0.79 through retrieval and ranking experiments.

Concurrent Web Crawler and Search Engine | Java, Spring Boot, PostgreSQL, Docker

2025

- Built a multithreaded Java crawler with a thread-safe BFS frontier, URL canonicalization, politeness-aware rate limiting, and retries, indexing 25,000+ pages across 16 concurrent workers.
- Implemented an inverted index and BM25 top-k ranking with hash maps and priority queues, achieving 75 ms p95 search latency across 1,000 benchmark queries.
- Exposed search via a Spring Boot/PostgreSQL REST API with JUnit tests, Docker, GitHub Actions CI, load tests, and 85% statement coverage.
