EDUCATION

PURDUE UNIVERSITY West Lafayette, IN
Bachelor of Science in Computer Engineering Expected May 2028 | GPA: 3.68
• Minor in Artificial Intelligence/Machine Learning
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Architecture, Computer Networks

TECHNICAL SKILLS

Languages: Java, Python, C++, C, TypeScript/JavaScript, SQL, Swift, Kotlin
Frameworks & Data: Spring Boot, React, Node.js, FastAPI, Flask, PostgreSQL, SQLite
Systems & Tools: Git, Linux/Unix, AWS, Docker, REST APIs, WebSockets, pytest, JUnit, GitHub Actions CI/CD

EXPERIENCE

ADT Boca Raton, FL / Remote
AI & Automation Software Engineer August 2026 – Present
Software Engineering Intern — AI & CX Systems May 2026 – August 2026

- Built Python/pandas pipelines to classify AI-assisted support interactions, standardize fragmented use-case labels, and prioritize data-quality and product defects.
- Built pytest regression tests for conversational AI and retrieval, checking routing, escalation, and agent handoffs.
- Contributed to LLM workflow development and model training; automated validation across alarm, billing, and account data and partnered with engineers to verify fixes.

L3Harris West Lafayette, IN / Remote
Software Engineering Intern — ML Systems August 2025 – December 2025

- Developed Python ETL and validation pipelines for 200,000+ NASA NOS3 telemetry records, producing windowed features with automated schema, completeness, and outlier checks.
- Tuned scikit-learn anomaly-detection models, increasing labeled attack recall from 68% to 83% through feature engineering and error analysis; evaluated with precision, recall, ROC-AUC, and confusion matrices.
- Automated Linux/VirtualBox packet capture and injection for 10,000+ labeled traces, cutting setup time by 40%.

ALPHA NET Santa Clara, CA
Software Engineer Intern May 2025 – August 2025

- Shipped JavaScript web features and AWS Lambda-backed data workflows supporting 50,000+ monthly user sessions.
- Built native features in Swift and Kotlin with REST API integrations, cutting user-data response time by 20%.
- Automated AWS Lambda and Amplify deployment workflows, cutting release turnaround time by 30%.

PROJECTS

Concurrent Web Crawler | Java, Spring Boot, PostgreSQL 2025

- Built bounded asynchronous crawl jobs with a thread-safe BFS frontier, host-aware throttling, retries, duplicate suppression, and cancellation.
- Exposed BM25 search and REST status endpoints with Actuator/Prometheus metrics, persistent PostgreSQL storage, Docker, and 20 deterministic tests.

Converge CRDT Board | TypeScript, React, Node.js, PostgreSQL 2026

- Built a local-first React/TypeScript board with optimistic updates, offline operation queues, and deterministic merging of concurrent edits.
- Implemented replayable WebSocket sync and idempotent PostgreSQL writes; tested reconnects, duplicate delivery, and 200 randomized convergence runs.

Chronicle LSM Store | C++20, WAL, Bloom Filters 2026

- Built an embedded C++20 LSM store with CRC-protected write-ahead logging, atomic batches, skip-list indexing, Bloom-filtered SSTables, and crash recovery.
- Implemented range scans, tombstone-aware compaction, and concurrent reads; verified torn-write handling and storage invariants with 11 tests and ASan/UBSan.

LEADERSHIP & TEACHING

Teaching Assistant | Purdue ECE 36800 Data Structures
Machine Learning Engineer | ML@Purdue — LLM project implementation and evaluation
